

# CHAT-APP

Welcome to the **Real-Time Chat Application** project documentation. This application is designed to facilitate seamless communication with friends and contacts, offering a dynamic and engaging chatting experience. With the Real-Time Chat Application, users can enjoy various features that enhance their interactions, including media sharing and real-time status updates that show when users are online or offline. This documentation will guide you through the application's functionalities, setup, and usage to ensure you get the most out of your chatting experience.

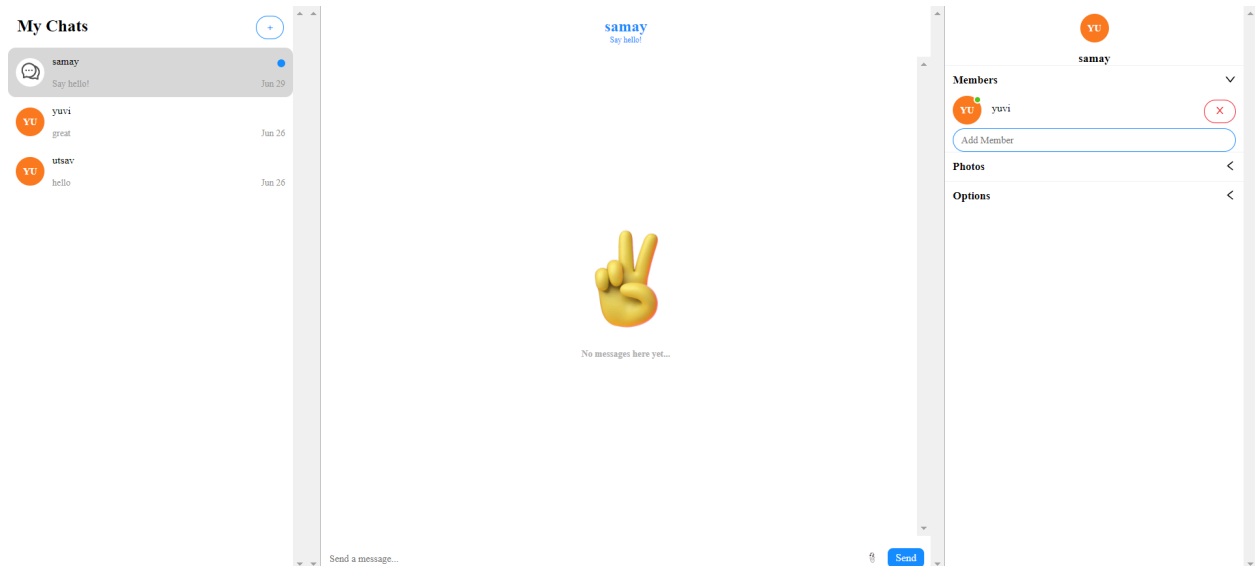

I have created this app using Node.js, React.js, and ChatEngine.io. The app supports group chats, 1-on-1 chats, real-time messaging, image and file support, read receipts, and more!

**Github Link:** <https://github.com/iutsavbansal/chat-app.git>

**Login Page:** With the help of this page, users can log in or create a new account by entering their username.

**Chat-Dashboard:** This is the dashboard users will see after a successful login. On the left side, users can view previous chats. New chats can be created by clicking the "+" button, and additional members can be added by using the "Add Member" option on the right side.

**Chatting Interface:** This is the interface of the chat app where users can text or share media. The online/offline status of users can be seen on the right side.
